

## Template

This is a jinja template. You can write plain markdown text into the template like this.

## YAML data

You can also refer to variables in the yaml files, using syntax like this:

```
15 The sundance kid
```

Which renders like this:

```
15 The sundance kid
```

## Markdown data

You can refer to *content* in the markdown data with the `.content` attribute, using the name you put in the config file `# Text content`

Here is some text, which renders like this::

```
# Text content
```

```
Here is some text
```

You can also refer to the yaml metadata in your markdown files, using `text_property_value`:

```
text_property_value
```
