Template

This is a jinja template. You can write plain markdown text into the template like this.

YAML data

You can also refer to variables in the yaml files, using syntax like this:

{{ number_of_things }} {{ name_of_person }}

Which renders like this:

15 Bill Cassidy

Markdown data

You can refer to *content* in the markdown data with the `.content` attribute, using the name you put in the config file {{ some_text_data.content }}, which renders like this::

```
# Text content

Here is some text
```

You can also refer to the yaml metadata in your markdown files, using {{ some_text_data.metadata.text_property }}:

```
text_property_value
```
